

Part 1: What is an Acid?
> Draw a picture representing what you think HCl looks like when it is in water.
> Write two chemic al equations that chemists use to represent dissoc iation of HCl in water.

Write a chemical equation that represents the following strong acids when they are placed in water.

1. HI
2. $\mathrm{HNO}_{3}$
3. $\mathrm{H}_{2} \mathrm{SO}_{4}$

Discussion: What is the difference between a strong and weak acid? Use chemical equations to illustrate your thinking.
> Write the chemical equation that represents dissociation of HF in water.

## Part 2: What is a base?

> Draw a molecular level picture representing what you think NaOH looks like when it is in water.
> Write the chemical equation that represents dissociation of NaOH in water.
> What about weak bases....how would you represent $\mathrm{NH}_{3}$ in water with a chemical equation?
> Write the chemic al equation that represents the following strong bases when they are placed in water.

1. KOH
2. $\mathrm{Al}(\mathrm{OH})_{3}$
3. $\mathrm{Ca}(\mathrm{OH})_{2}$

Part 3: Bronsted-Lowry Definition of Acids and Bases

| $\mathrm{HCl}(\mathrm{g})$ | + | $\mathrm{H}_{2} \mathrm{O}(\mathrm{aq})$ | $\longrightarrow$ | $\mathrm{H}_{3} \mathrm{O}^{+}(\mathrm{aq})$ | + | $\left.\mathrm{Cl}^{(-\mathrm{aq}}\right)$ | $2 \frac{\mathrm{~K}_{\mathrm{c}}}{\mathrm{x}} \times 10^{4}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{NH}_{3}(\mathrm{aq})$ | + | $\mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ | $\longrightarrow$ | $\left.\mathrm{NH}_{4}{ }^{+} \mathrm{aq}\right)$ | $+$ | $\mathrm{OH}^{-}(\mathrm{aq})$ | $3.3 \times 10^{-7}$ |
| HCN(aq) |  | $\mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ | $\longrightarrow$ | $\mathrm{H}_{3} \mathrm{O}^{+}(\mathrm{aq})$ | + | $\mathrm{CN}^{-}(\mathrm{aq})$ | $1.1 \times 10^{-11}$ |

1. For the third equation above, build a model representing the reaction. Then act out the reaction several times with the models. Finally, draw a molecularlevel picture representing the reaction and label the acids and bases on your white board.
2. Which chemical species are the Bronsted-Lowry acids and bases in the forward reactions?
3. Is it possible for a substance to act as both and acid and a base? Explain.
4. Which do you think is considered the stronger acid, HCl or HCN ? Expla in
5. Build and draw this Conjugate acid-base pair. $\mathrm{HCO}_{3}-/ \mathrm{CO}_{3}{ }^{2-}$ and have a discussion about which one is the acid, which one is the base, and why they have the -1 and -2 charges?
6. The following reactions are important environmental processes. Identify the conjugate acid-base pairs.
a. $\mathrm{H}_{2} \mathrm{PO}^{4}(\mathrm{aq})+\mathrm{CO}_{3^{2-}}(\mathrm{aq}) \rightleftarrows \mathrm{HPO}_{4^{2}-(\mathrm{aq})+\mathrm{HCO}_{3^{-}}(\mathrm{aq})}$
b. $\mathrm{H}_{2} \mathrm{O}(\mathrm{I})+\mathrm{SO}_{3}{ }^{2}-(\mathrm{aq}) \rightleftarrows \mathrm{OH}^{-}(\mathrm{aq})+\mathrm{HSO}_{3}-(\mathrm{aq})$
7. Predict the net direction foreach of the following reactions (assume equal initial concentrations of all species):

$$
\begin{aligned}
& \mathrm{H}_{2} \mathrm{PO}_{4}^{-}(a q)+\mathrm{NH}_{3}(a q) \rightleftharpoons \mathrm{HPO}_{4}{ }^{2-}(a q)+\mathrm{NH}_{4}^{+}(a q) \\
& \mathrm{H}_{2} \mathrm{O}(\mathrm{l})+\mathrm{HS}^{-}(a q) \rightleftharpoons \mathrm{OH}^{-}(a q)+\mathrm{H}_{2} \mathrm{~S}(a q)
\end{aligned}
$$

## Part 4: Problem Solving

1. 

| $\left[\mathrm{H}^{+}\right]$ | pH | pOH | $\mathrm{A} / \mathrm{B} / \mathrm{N}$ |
| :---: | :---: | :---: | :---: |
| $3.0 \times 10^{-4}$ |  |  |  |
| $1.0 \times 10^{-7}$ |  |  |  |
| $7.3 \times 10^{-3}$ |  |  |  |

2. The pH of rainwater collected in a certain region of the northeastem United Stateson a particular day was 4.82 . What is the $\mathrm{H}+$ ion concentration of the rainwater?
3. The $\mathrm{OH}^{-}$ion concentration of a blood sample is $2.5 \times 10^{-7} \mathrm{M}$. What is the pH of the blood?
4. What is the pH of a 0.235 M monoprotic acid whose $\mathrm{K}_{\mathrm{a}}$ is $5.7 \times 10^{-4}$ ?
5. Phenyla cetic acid ( $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{CH}_{2} \mathrm{COOH}$, simplified here as HPAc ) builds up in the blood of persons with phenylketonuria, an inherited disorder that, if untreated, causes mental retardation and death. A study of the acid shows that the pH of 0.13 M HPAc is 2.62. What is the Ka of phenylacetic acid?
6. What is the pH of a 0.500 M ethylamine $\left(\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{NH}_{2}\right)$ solution? $\left(\mathrm{K}_{\mathrm{b}}=6.4 \times 10^{-4}\right)$
7. Ascorbic acid $\left(\mathrm{H}_{2} \mathrm{C}_{6} \mathrm{H}_{6} \mathrm{O}_{6} ; \mathrm{H}_{2}\right.$ Asc for this problem), known as vitamin C , is a diprotic a cid ( $\mathrm{K}_{\mathrm{a} 1}=1.0 \times 10^{-5}$ and $\mathrm{K}_{\mathrm{a} 2}=5 \times 10^{-12}$ ) found in citrus fruit. Calculate [ $\mathrm{H}_{2}$ Asc ], [HAsc ${ }^{-}$], [Asc ${ }^{2}$ ], and the pH of $0.050 \mathrm{M} \mathrm{H}_{2}$ Asc.
8. Sodium acetate ( $\mathrm{CH}_{3} \mathrm{COONa}$, or NaAc for this problem) has applications in photographic development and textile dyeing. What is the pH of 0.25 M NaAc ? $\mathrm{Ka}_{\mathrm{a}}$ of acetic acid (HAC) is $1.8 \times 10^{-5}$.

## Part 5: Ocean Acidific ation

1. a. Write the equations that represent the complex equilibrium between $\mathrm{CO}_{2}, \mathrm{H}_{2} 0$, $\mathrm{HCO}_{3}$ and $\mathrm{CO}_{3}{ }^{2-}$. Be sure to refer to the artic les we've read to make sure you understand these processes.
b. Which of the ions above is decreasing in concentration as the ocean acidifies?
2. Write the equation that represents both the formation and destruction of $\mathrm{CaCO}_{3}$.
3. Expla in how an increase in atmospheric $\mathrm{CO}_{2}$ puts our coral reefs a nd other sea life in danger. Use the equations above in your discussion.
