AR	Digital logic and digital systems	0	2	0	Comprehend that multicore is the trend in architecture. Describe implications of the "power wall."
AR	Assembly level machine organization	0	2	0	Describe instruction execution with threads & synchronization, SIMD. Describe ILP.
AR	Interfacing and communication	0	1	0	Compare common network organizations.
AR	Functional organization	0	0	1	Explain ILP using pipelining and hazards that occur.
AR	Multiprocessing and alternative architecture	0	0	5	Explain the concept of interconnection networks; characterize approaches and explain differences. Describe SIMD, MIMD, e.g.
AR	Performance enhancements	0	0	1	Discuss performance advantages of multithreading and difficulty achieving max benefits.
CN	Processing	0	0	3	Describe task, data, and event parallelism. Compare and contrast parallel programming
GV	Basic Rendering	0	0	1	paradigms. Design, code, test and debug parallel programs.  Describe the basic graphics pipeline.
	Collaboration and communication	0	0	1	Describe the differences between synchronous and asynch. comm.
_	Defensive Programming	1	0	0	Demonstrate how to prevent a race condition from occurring.
	Network Security	0	2	0	Describe categories of network threats and attacks . Describe virtues and limitations of
IAS	Web Security	0	0	5	security technologies.  Understand the browser security model. Understand common types of vulnerabilities and
IAS	Security Policy and Governance	0	0	1	attacks in web applications  Understand the risks and benefits of outsourcing to the cloud
		0	1	0	Describe approaches that scale up to globally networked systems.
IM	Information Management Concepts Distributed Databases	0	0	5	Explain the techniques used during distributed database design Describe the three
	Information Storage and Retrieval	0	0	1	levels of software in the client-server model.  Perform Internet-based research.
-	Introduction	2	0	0	Articulate organization of the Internet. Define network terminology.
	Networked Applications	1	0	0	Implement a simple client-server socket-based application.
	Reliable Data Delivery	0	2	0	Describe reliable delivery protocols and implement one.
_	Resource Allocation	0	2	0	Describe resources allocation in a network & congestion problem.
_	Mobility	0	1	0	Describe how wireless networks support mobile users.
OS	Overview of Operating Systems	1	0	0	Discuss networked, client-server, distributed operating systems .
	Operating System Principles	0	1	0	Describe the need for concurrency in an operating system
	Concurrency	0	4	0	Demonstrate the potential run-time problems arising from the concurrent operation of many separate tasks. Summarize the range of mechanisms that can be employed to realize concurrent systems. Describe interrupts, dispatching, and context switching.
PBD	Web Platforms	0	0	2	Design and Implement a simple web application; describe software as a service.
PD	Parallelism Fundamentals	1	0	0	Distinguish data races from higher level races.
PD	Parallel Decomposition	1	3	0	Explain why synchronization is necessary in a specific parallel program; Write a correct and scalable parallel algorithm; Parallelize algorithms by applying task and data decomposition.
PD	Communication and Coordination	1	9	1	Give an example of an ordering of accesses among concurrent activities that is not sequentially consistent. Write correct concurrent task program. Use synchronized queue. Write a concurrent program that can reveal error, e.g. update shared variable. Describe how to avoid liveness

PD	Parallel Algorithms, Analysis, and Programm	0	5	3	Critical path analysis; Define speedup; Provide producer-consumer example; identify
PD PD	Parallel Algorithms, Analysis, and Programm Parallel Architecture	0	5	3	Critical path analysis; Define speedup; Provide producer-consumer example; identify issues in P-C algorithms; give examples where pipelining applies.  Explain the differences between shared and distributed memory; describe SMP; describe
PD	Parallel Architecture	1	2	3	Critical path analysis; Define speedup; Provide producer-consumer example; identify issues in P-C algorithms; give examples where pipelining applies. Explain the differences between shared and distributed memory; describe SMP; describe tasks that match SIMD arch.
PD PD	Parallel Architecture Parallel Performance	1	2	3	Critical path analysis; Define speedup; Provide producer-consumer example; identify issues in P-C algorithms; give examples where pipelining applies. Explain the differences between shared and distributed memory; describe SMP; describe tasks that match SIMD arch.  Amdahl's law, false sharing, scheduling, communication costs, load imbalance,
PD PD PD	Parallel Architecture Parallel Performance Distributed Systems	1 0 0	2 0 0	3 7 9	Critical path analysis; Define speedup; Provide producer-consumer example; identify issues in P-C algorithms; give examples where pipelining applies. Explain the differences between shared and distributed memory; describe SMP; describe tasks that match SIMD arch.
PD PD PD	Parallel Architecture Parallel Performance Distributed Systems Cloud Computing	1 0 0	2 0 0	3 7 9 3	Critical path analysis; Define speedup; Provide producer-consumer example; identify issues in P-C algorithms; give examples where pipelining applies.  Explain the differences between shared and distributed memory; describe SMP; describe tasks that match SIMD arch.  Amdahl's law, false sharing, scheduling, communication costs, load imbalance,  Distinguish network faults from other kinds of failures; concensus algorithms;  Discuss the importance of elasticity and resource management; deploy cloud infrastructure application;
PD PD PD	Parallel Architecture Parallel Performance Distributed Systems	1 0 0	2 0 0	3 7 9	Critical path analysis; Define speedup; Provide producer-consumer example; identify issues in P-C algorithms; give examples where pipelining applies. Explain the differences between shared and distributed memory; describe SMP; describe tasks that match SIMD arch.  Amdahl's law, false sharing, scheduling, communication costs, load imbalance,  Distinguish network faults from other kinds of failures; concensus algorithms;  Discuss the importance of elasticity and resource management; deploy cloud infrastructure application;  Model a concurrent process using a formal model, such as pi-calculus
