

## Miocene Timeline Cards – Part B

<b>Miocene Epoch Begins</b>	<b>Antarctica Separates from Australia and South America</b>	<b>The N. American tectonic plate pushes material up as it collides with the Pacific plate, creating the St. Elias Mountains</b>
<b>Surveyor Channel submarine fan forms distributing sediments from onshore Alaska to deep waters in the Gulf of Alaska</b>	<b>African plate collides with Europe</b>	<b>Pliocene Epoch begins</b>

## Miocene Timeline Cards – Part B

<b>Tidewater glaciers form in the St. Elias Mountains</b>	<b>North America and South America join at Panama allowing migration of animals.</b>	<b>Arctic ice cap forms</b>
<b>Pleistocene Epoch begins. A period of global cooling begins</b>	<b>Glaciers start to advance in the N. Hemisphere; North Cordilleran ice sheet advances over S. Alaska and Pacific Northwest</b>	<b>Glacial Erosion on land in S. Alaska becomes more intense</b>

## Miocene Timeline Cards – Part B

<b>Hominids use stone tools</b>	<b>Uplift of Chugach and St. Elias Mountains in Alaska increases</b>	<b>Beginning of Menapian glacial period</b>
<b>End of Menapian glacial period</b>	<b>Beginning of Pre- Ilionian glacial period</b>	<b>End of Pre- Ilionian glacial period</b>

## Miocene Timeline Cards – Part B

<b>Hominids use fire</b>	<b>Beginning of Illonian glacial period. Laurentide ice sheet covers 85% of Illinois</b>	<b>Homo Sapiens appears</b>
<b>End of Illonian glacial period</b>	<b>Beginning of Wisconsin glacial period, the most recent advance of N. American glaciers</b>	<b>Last Glacial Maximum begins – ice sheets are at their thickest and sea levels at their lowest</b>

## Miocene Timeline Cards – Part B

<b>Sea level begins to rise as ice sheets and glaciers begin to melt</b>	<b>End of Wisconsin glacial period</b>	<b>Holocene Epoch begins. Beginning of current interglacial period.</b>
<b>Beginning of agriculture</b>	<b>Sea level reaches modern-day levels</b>	<b>Beginning of “Little Ice Age,” crop failures, famine are widespread</b>
