Pandemic Flu Modeling

Glyphs showing the types, stages and levels of transmission

PHYSICS TODAY

Mingling art and science opens minds

Collaborations enrich science communication, visualization, and inspiration.

Toni Feder

Simulating ocean circulation gives clues about climate change. This view toward the South Pole is a snapshot of the Antarctic ice sheet. The yellow and orange squiggles are currents, and light blue to purple represents increasing water depth, with the transition to purple indicating the continental slope. The tracers indicate parameters such as salinity and ice shelf water. The US Department of Energy's Energy Exascale Earth System Model incorporates hundreds of variables and has a resolution of 10 km. (Courtesy of the Sculpting Vis Collaborative, Daniel Keefe, and Francesca Samsel, funded by NSF #IIS 1704604 and 1704904.)

Sculpting Visualizations

Expanding the Vocabulary

Francesca Samsel
Texas Advanced Computing Center
University of Texas at Austin

Sculpting Vis

Why

- engagement
- scientific clarity
- depth of understanding
- affective communication

What

A system for creating compelling immersive scientific visualization created from one's own vocabulary.

How

- tapping artistic design and vocabulary
- lay-person designed user interface
- sampling algorithms
- a multidisciplinary team

Artifacts from the Studio, into the Vis

Surface texture

Glyphs

Lines

Surface
Texture

Surface
Cut-out

Enriching & Structuring the Vocabulary

- encode greater number of variables
- intuitive associative properties
- categorial sets
- human connection

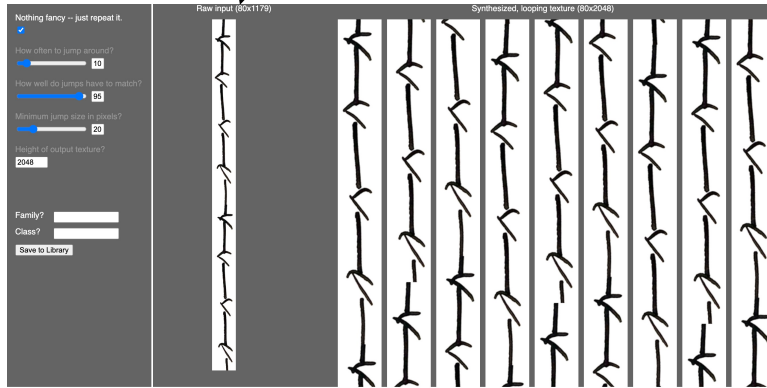

The Library

lines
glyphs
textures
color

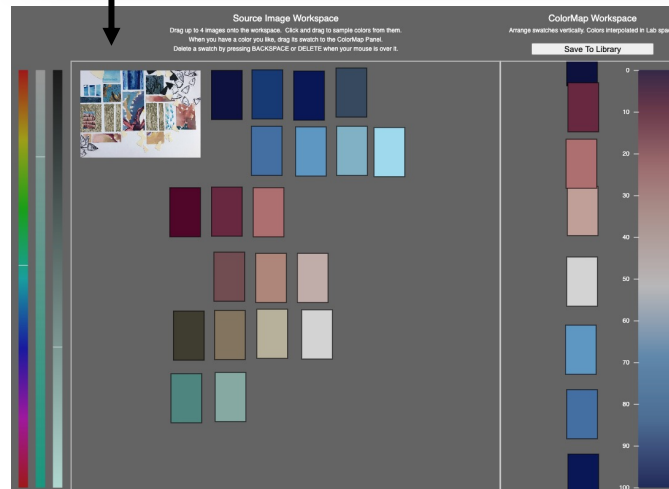

2D Artifacts

Lines.

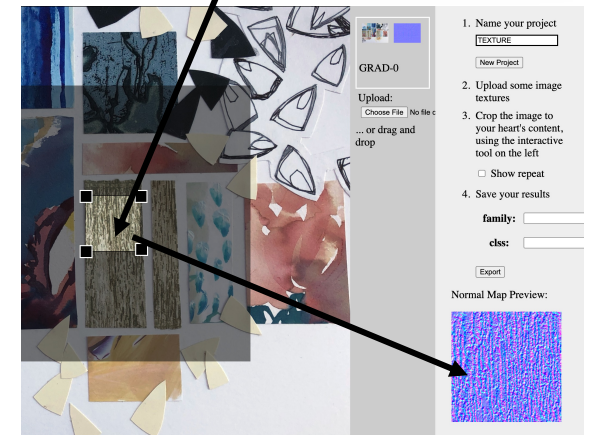

Importing assets to the library

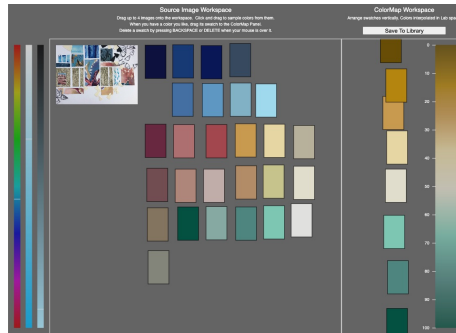

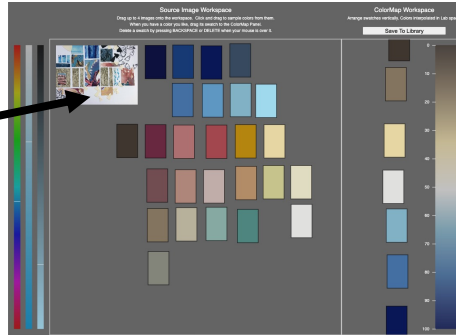

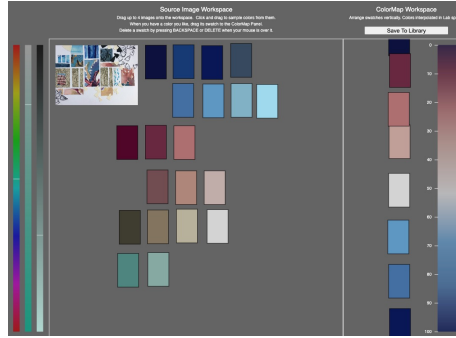

Colormaps.

Textures

Making Colormaps

process

textures

Artifact-Based Rendering

3D Artifacts

1. Making 3D Artifacts

2. Capturing 3D Artifacts

Glyph Align

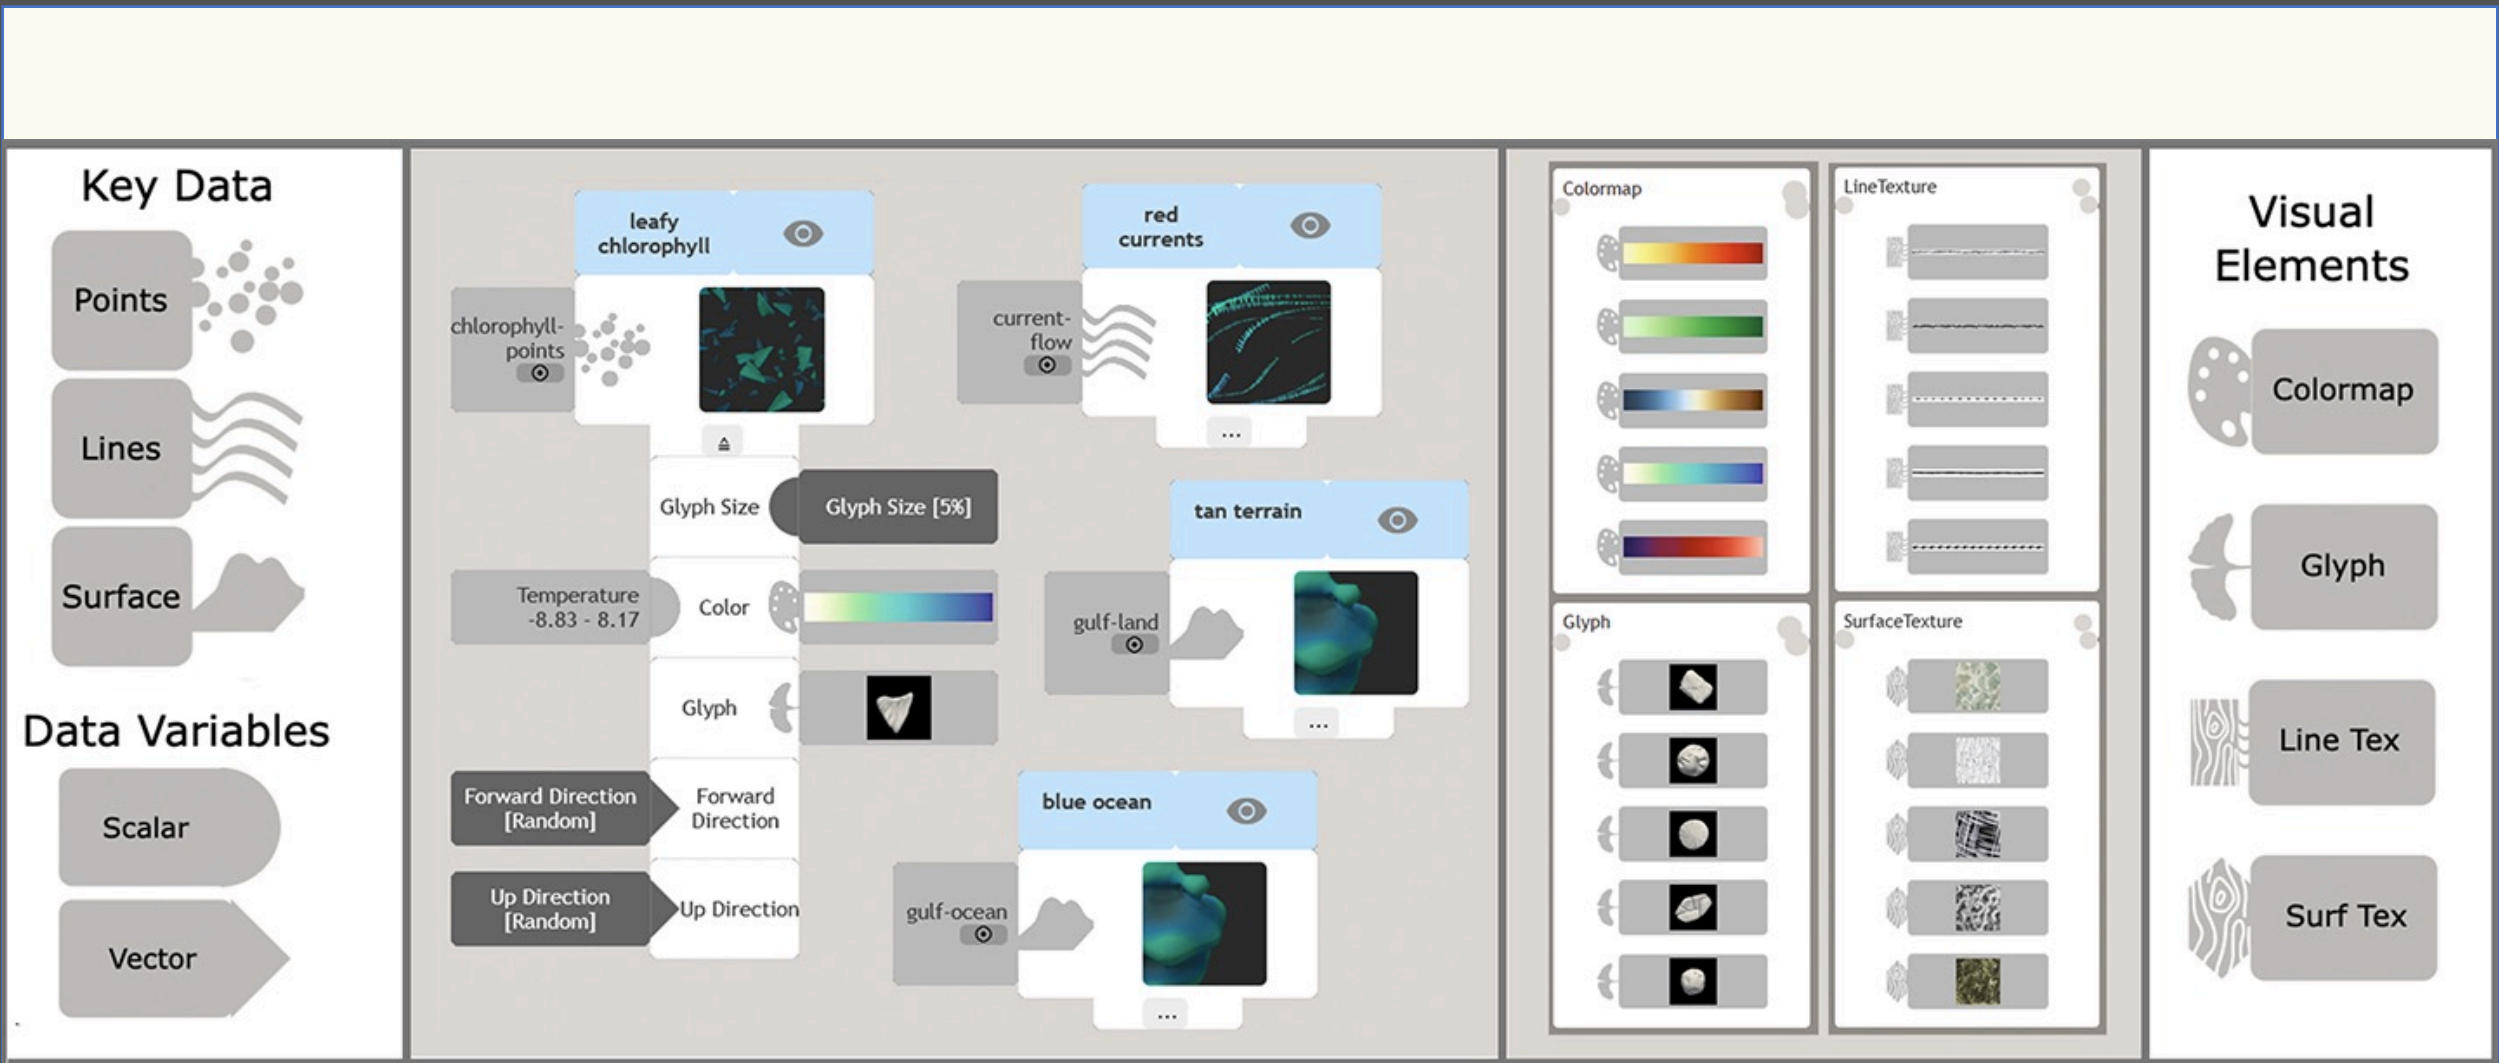

Data-Driven

3. Aligning 3D Artifacts

4. Resulting 3D Artifacts

The interface, designed for ease of use

Visualizations created in ParaView, the role of sampling

scientist team visualization

- Data processed in Paraview
- volume converted to point data
- glyphs rendered on point data based on density

biogeochemistry in the Gulf of Mexico, MPAS-Ocean. LANL

Above visualization, a collaboration with Data Science at Scale, LANL, and the TACC visualization team, funded by the Office of Science, ASCR, DOE

- engagement
- represents and groups large number of variables
- associative representation
- communication

VR video

and for the artist,
moving full circle back to abstraction,
and exploring engagement.

Touch-driven AR interface for exploring multivariate data

Data:
MPAS-Ocean, LANL

The waters under the Filchner-Ronne Ice Shelf shown in AR on the printed interactive bathymetry And in large format above.

Segmented touch-sensitive Bathymetry enables scientists To select positions of streamlines and cutting planes.

Rear projection
Creating immersion,
without breaking the bank
