

# Preparing the Next Generation

Welcome to Day 2,  
objectives and overview  
from Day 1

## Workshop Program (Day 2)

**How can scientific ocean drilling best prepare the next generation of Earth scientists?**

15:00 *Welcome, Recap from Day 1 and Questions for Day 2*

15:10 *How can scientific ocean drilling's professional development be enhanced to develop critical scientific and transdisciplinary skills for educators?*

15:25 *How can we effectively expand/prioritize training programs for scientists involved with scientific ocean drilling research?*

15:40 *What are effective mentoring strategies for graduate students, postdocs, and tenure-track faculty within scientific ocean drilling? How can we expand on effective mentoring, especially for those in historically marginalized groups in STEM?*

16:15 *Comfort Break*

16:25 *Q&A for all speakers*

16:45 *Breakout Group Discussions*

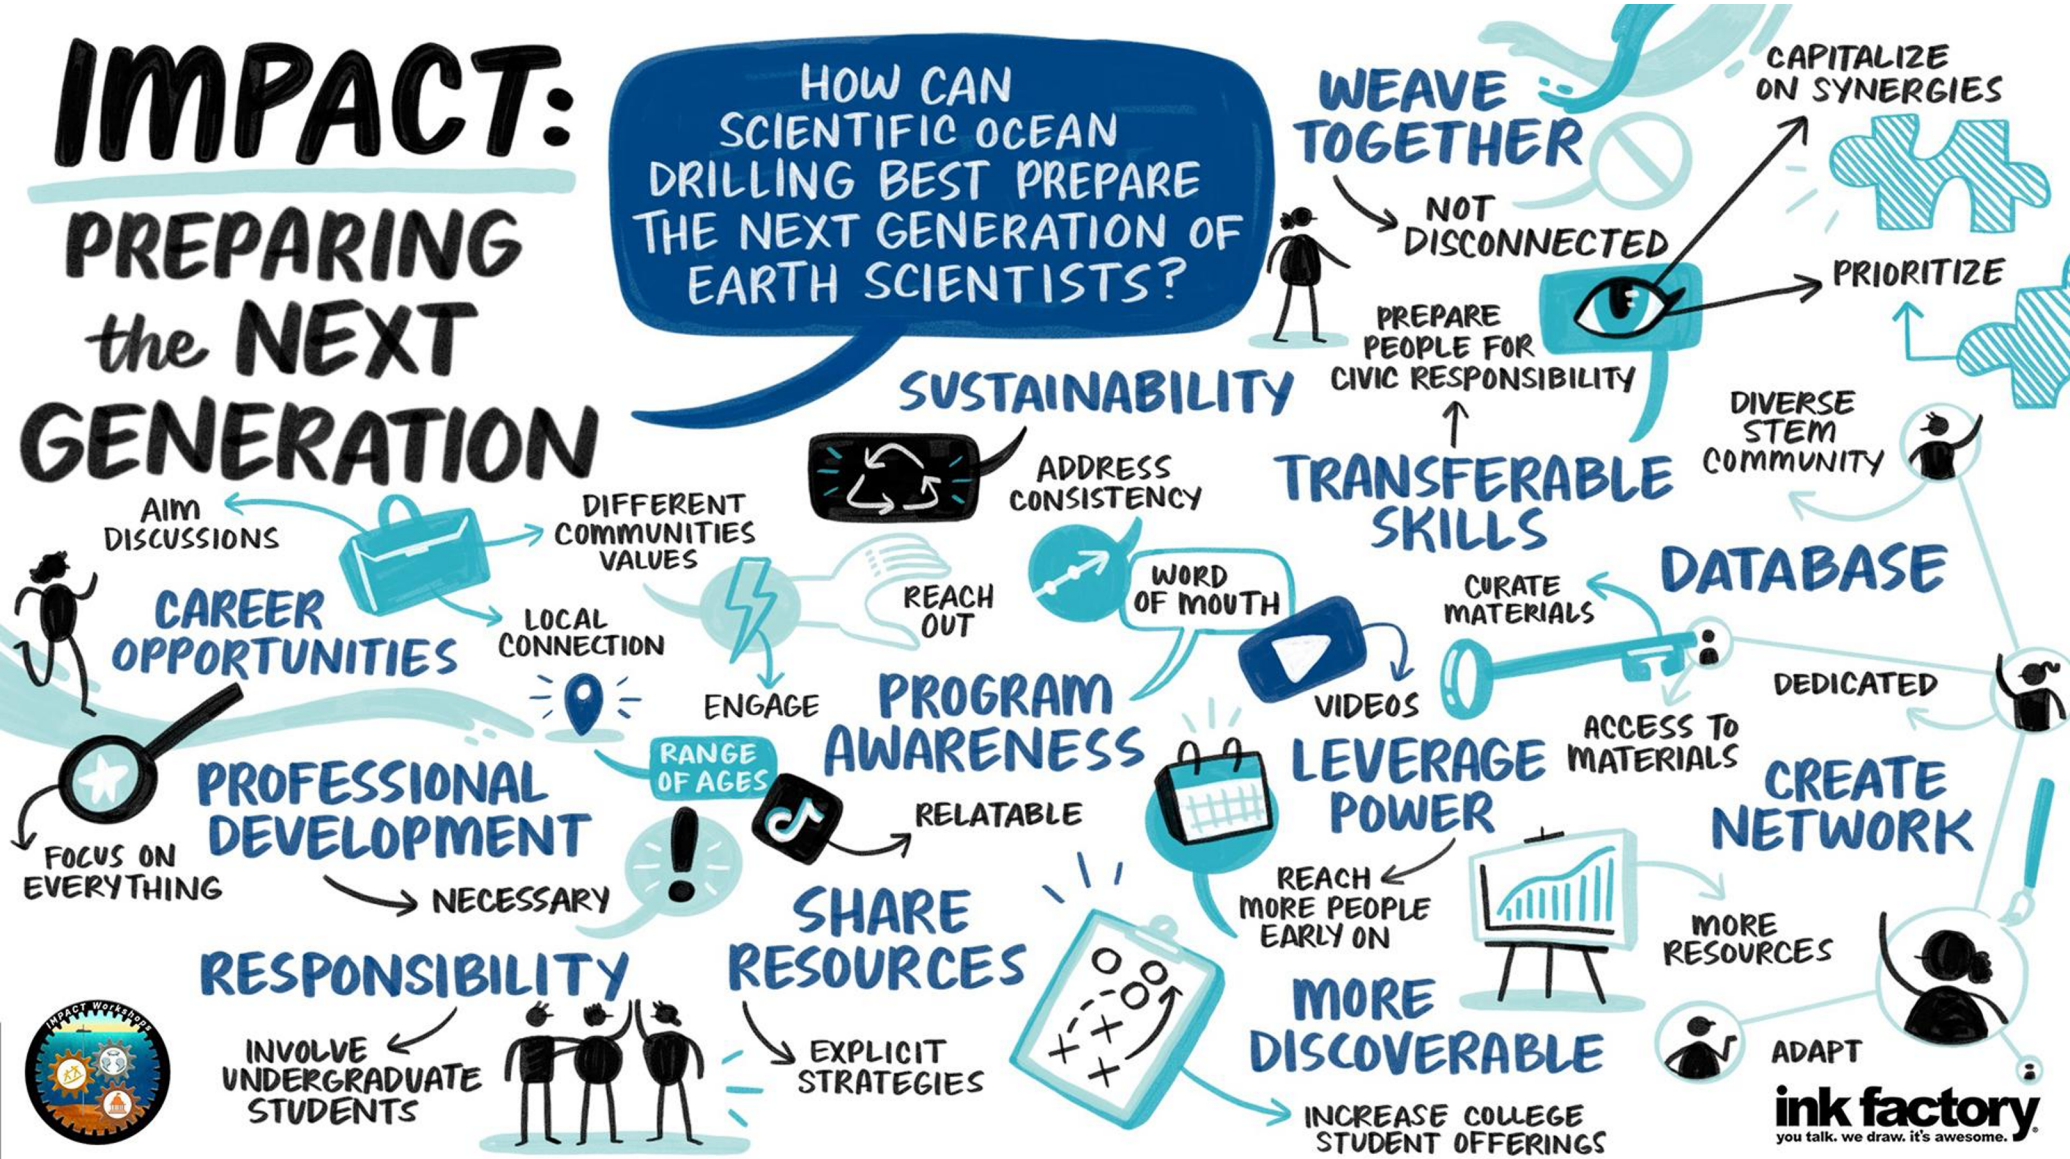

17:15 *Group Reports and Discussion*

17:50 *Summary and Next Steps*

All discussions can be continued on [the discussion boards](#).

# IMPACT: PREPARING the NEXT GENERATION

HOW CAN SCIENTIFIC OCEAN DRILLING BEST PREPARE THE NEXT GENERATION OF EARTH SCIENTISTS?

# Workshop Program (Day 2)

## Road Check Responses

### ***Top things you learned: Appreciation for the availability of resources***

- Learning about CURE's
- Learning about diversity in ocean drilling

### ***Topics that we need to address: Attracting and supporting a diverse community of students***

- Involving undergraduate and graduate students in research
- Opportunities for collaboration

### ***Respondents were generally very satisfied with the outcomes of the workshop***

- The lightning talks were a great way to introduce people to the topic
- This was very productive in only a few hours

### ***There were some comments on how quickly the chat was moving and that it was hard to keep up...***

- We will be reading through it and synthesizing all comments and resources from the chat!

All discussions can be continued on [the discussion boards](#).

## Workshop Driving Questions - Day 2

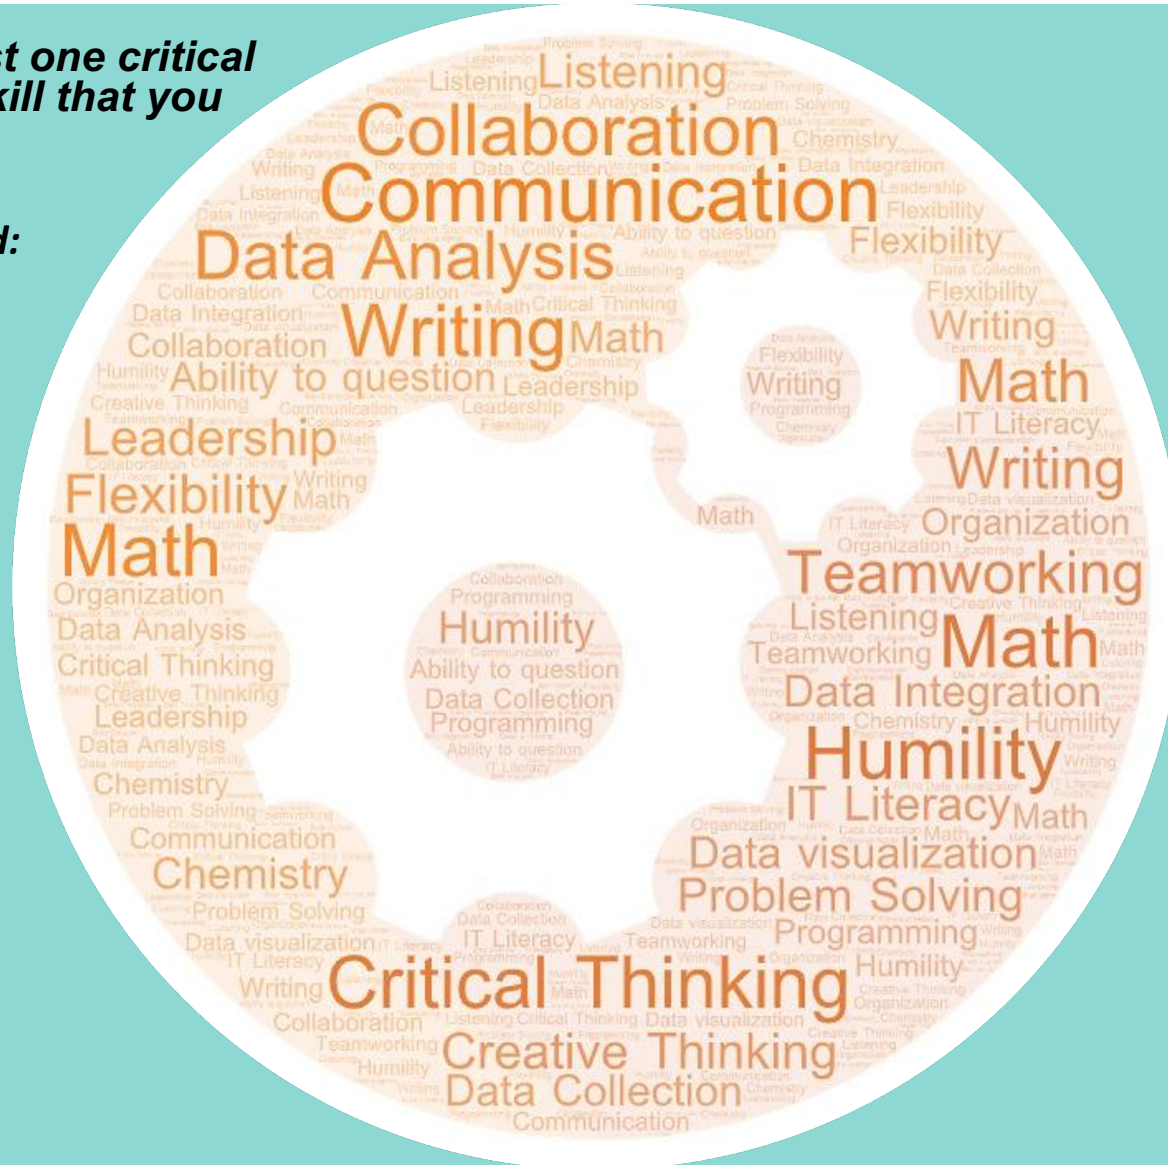

- ***How can scientific ocean drilling's professional development be enhanced to develop critical scientific and transdisciplinary skills for educators?***
- ***How can we effectively expand/prioritize training programs for scientists involved with scientific ocean drilling research?***
- ***What are effective mentoring strategies for graduate students, postdocs, and tenure-track faculty within scientific ocean drilling? How can we expand on effective mentoring, especially for those in historically marginalized groups in STEM?***

All discussions can be continued on [the discussion boards](#).

**We asked you to list one critical transdisciplinary skill that you think is essential:**

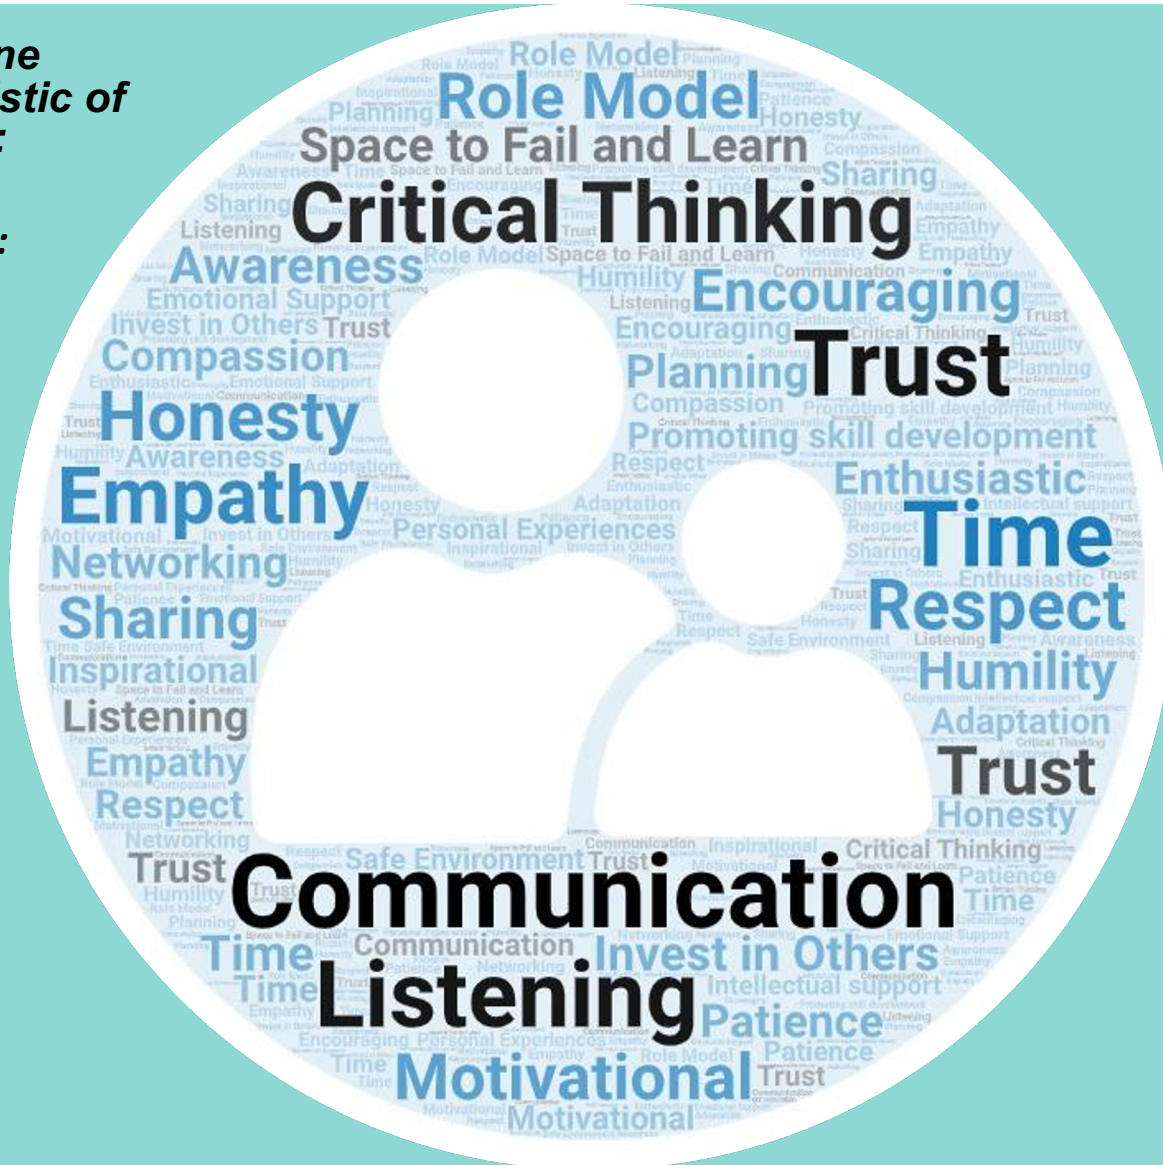

**You said:**

**We asked what is one essential characteristic of effective mentoring:**

**You said:**

Some commonalities between all three areas:

1. Communication
2. Critical Thinking
3. Skills Development
  - a. Scientific - Practical Skills (Data Analysis, Modelling, Coding)
  - b. Transdisciplinary - Leadership, Writing, Teamworking
  - c. Mentoring - Personal “Soft” Skills
