

"Reef Survivor Jr"

NEET Edition Game Instructions

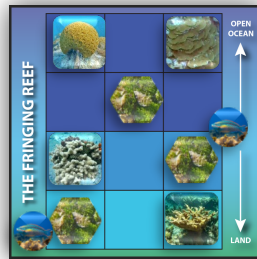

SET UP:

Choose 4 corals tokens to build your reef,
place your corals and 3 alga tokens
anywhere on the board

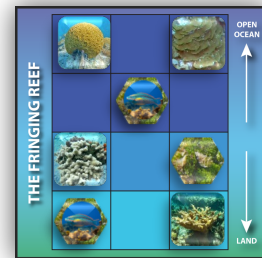

Gameplay

- 1) Assess the number of parrotfish that can live on your board.
(1 parrotfish for every 2 corals).

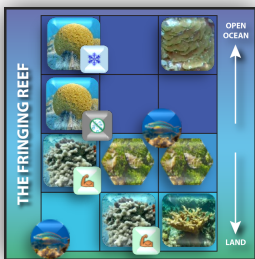

- 2) Each parrotfish token "eats" 1 alga token
(Remove it from the board).

"Nom
nom
nom!"

- 7) Algae reproduce (each token makes another
alga that takes over a place on the board).
If there is no room, your algae will cover a coral
(taking it out of play until the alga is eaten off).

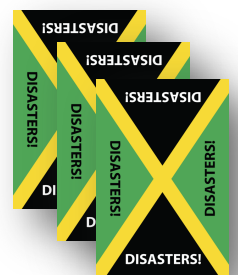

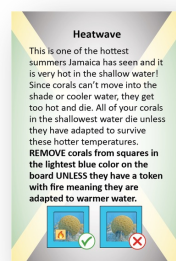

***The Winner is
the person
with the
healthiest reef
(the highest
score)!***

- 3) Roll the special dice to mutate each coral;
place the trait token you rolled on the
corals.

- 4) Pick a disaster card from the shuffled deck and follow
the instructions.

- 5) Score the board and write
down your result:
1 point for each coral on the
board & 1 point for each
different kind of coral.
